INTRODUCTION

Daliang Chen

Founder & Current General Manager

Mr. Chen founded Aquaspring in 2011. Before establishing the company, he had long been engaged in and directly managed workshop operations in the spa industry, accumulating more than 20 years of technical work experience.

Due to long-term in-depth contact with spa products, Mr. Chen has profound professional knowledge in product and technology, and has extremely high requirements for product quality, which has also promoted Aquaspring to form a strict corporate product quality standard.

Currently, even while overseeing overall enterprise operations, Mr. Chen remains deeply involved in R&D, working closely with our team and ensuring product quality with the rigor of a technical manager.

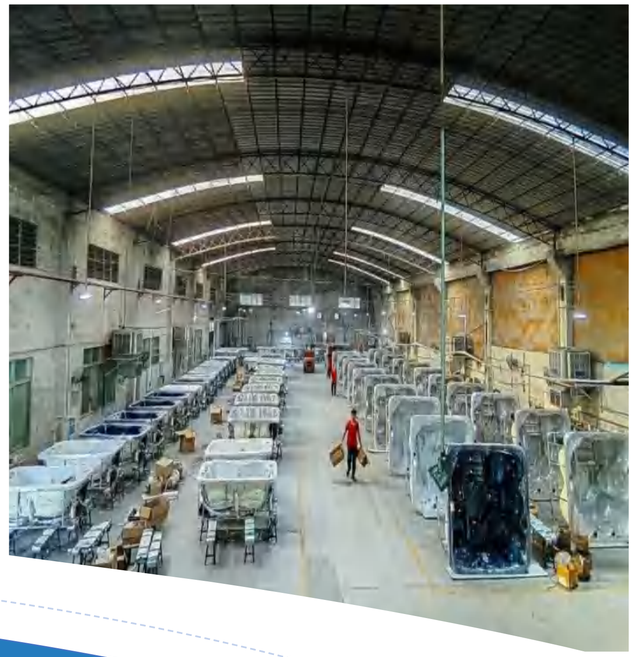
100+ Models, 10,000+ Capacity

We boast an extensive selection of spas, encompassing over 100 models. This comprehensive range covers various specifications, allowing us to provide customers with a wide array of options.

With an annual production capacity exceeding 10,000 sets, we boast robust large-scale manufacturing capabilities. We respond swiftly to bulk orders and consistently meet the supply needs of clients worldwide.

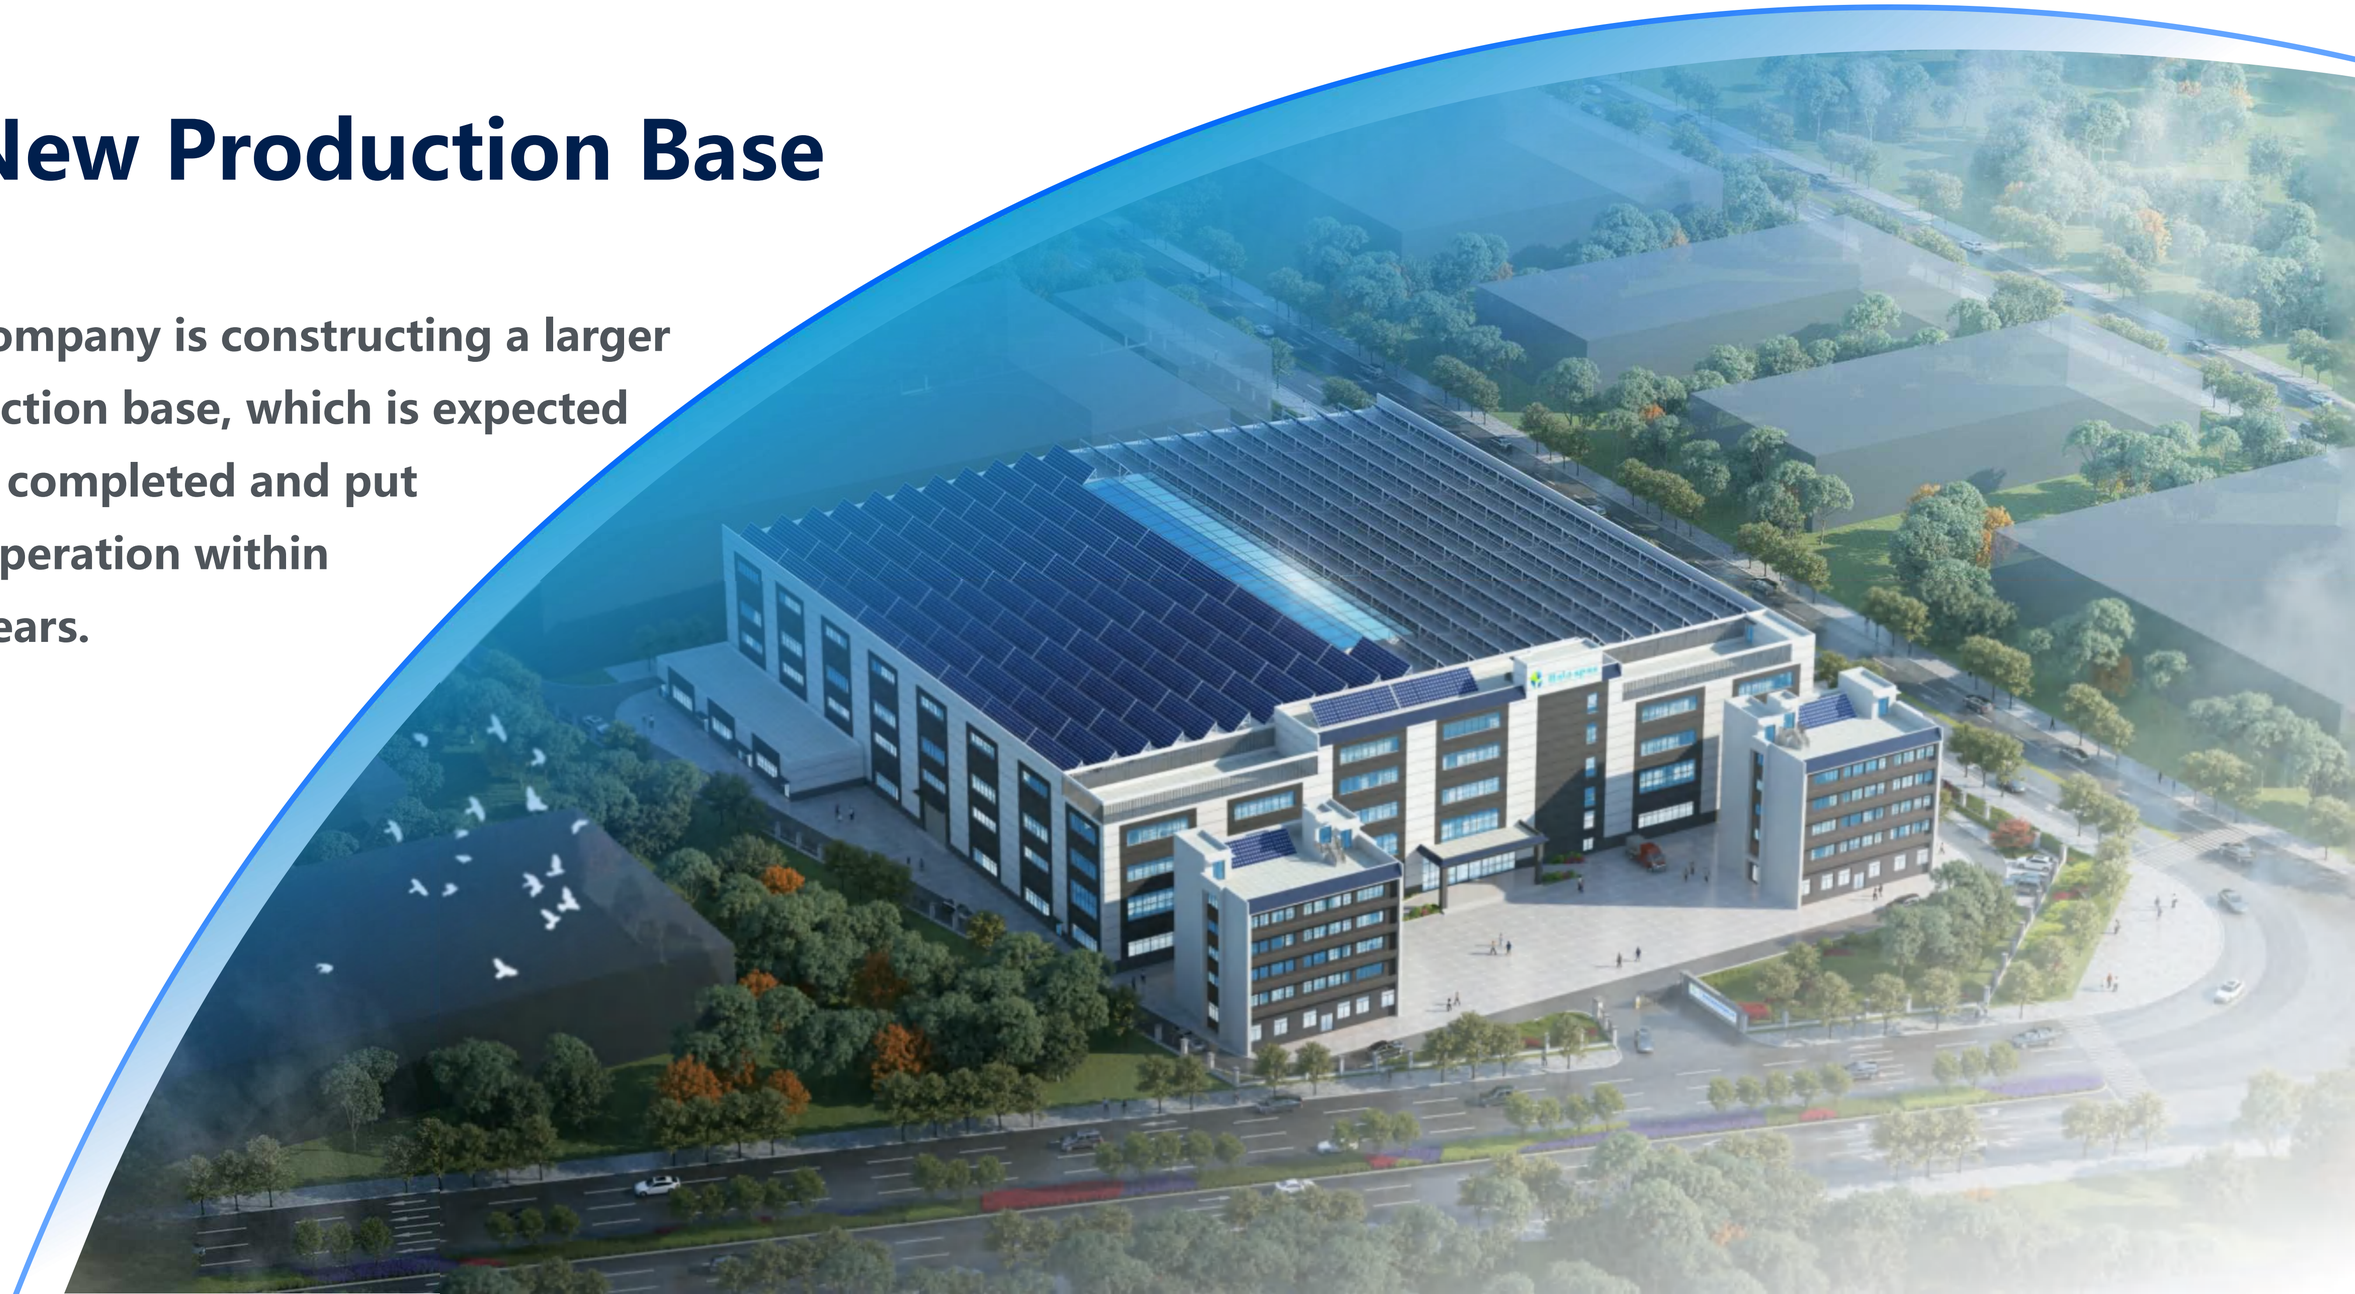
Scaled Production, Trusted Strength

Covering an area of over 15,000 square meters, our factory is equipped with standardized production workshops and professional equipment, providing ample space and support for large-scale and efficient production.



New Production Base

Our company is constructing a larger production base, which is expected to be completed and put Into operation within two years.



Stable Supply Chain, Guaranteed Delivery

Aquaspring has established long-term, stable partnerships with several high-quality raw material and component suppliers. Boasting abundant, stable, and diverse inventory resources, we ensure the timely supply of raw materials and components required for production from the source—thereby guaranteeing efficient delivery capabilities.

Services for Dealers

OEM&ODM Service

Offering both OEM and ODM services, we enable dealers to fast-track their own-branded spas and tailor product setups to regional consumer demands.

Regional Protection

We grant exclusive regional authorization for the product models distributed by our dealers. This fundamentally prevents homogeneous competition within the same region.

Custom Mold Benefits

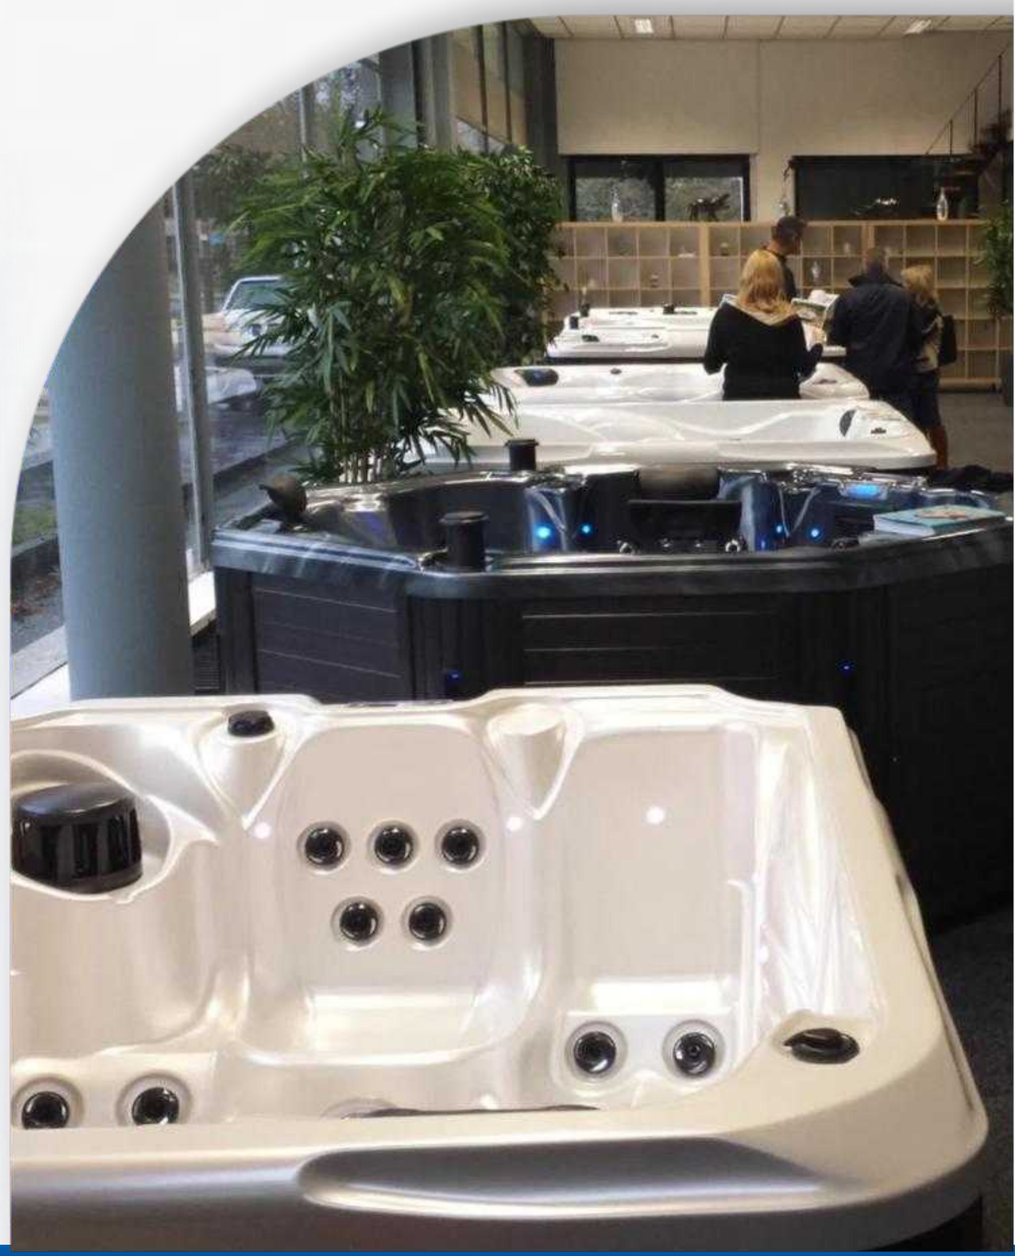
When the purchase quantity reaches the agreed-upon threshold, you can enjoy partial sharing or full exemption from mold costs, effectively reducing cooperation expenses.

Marketing Collateral Support

We provide marketing collateral free of charge, including catalogs, product photos and videos. These materials offer support for dealers' display, promotion and customer communication.

Marketing Resource

Leveraging our well-established marketing channels, we precisely share end-customer resources in dealers' respective regions, boosting their market expansion efficiency.



Service for projects

Customized Solution

Tailored to your requirements, we can create exclusive solutions. These solutions cover critical aspects such as product selection and layout planning.

Drawing Design Service

We provide free design drawings that comply with both industry standards and engineering best practices for your project.

Visual Effect Rendering

Through realistic 3D scene reconstruction, we can clearly demonstrate the post-installation spatial effect of spas to you.

Free Installation Guidance

We provide complimentary installation guidance, covering key aspects such as the installation process and operational standards, ensuring the spa is installed correctly.

After-Sales Service

We have always regarded customer service as equally important as product quality. Guided by our service philosophy of efficiency, responsibility, and professionalism, we have won sincere recognition from numerous customers and earned a strong reputation through word-of-mouth.

Rapid Response

We promise to respond to you within 12 hours for any after-sales requests you submit. This ensures your issue receives timely attention and initial feedback.

Fast, Clear & Fair Resolution

We will promptly clarify liability and strictly implement the compensation plan as agreed for any after-sales issues caused by product quality or service shortcomings.

Chairman-Led Resolution

For major after-sales issues, our Chairman personally leads a dedicated team to develop targeted solutions, ensuring the problem is addressed with focus and efficiency.

Control Systems

Durable control system

Aquaspring spas offers the Balboa control system as the standard system.

Joyonway (a sub-brand of Balboa) and Gecko are also available. We are one of the key customers of Balboa and Gecko in China.

Excellent shell

Aquaspring spas use American ARISTECH acrylic sheets. This acrylic not only has high strength and bright luster but also excellent durability and a long service life. It also features superior oxidation resistance, so it won’ t fade or discolor easily when used outdoors. More than 10 colors are available.

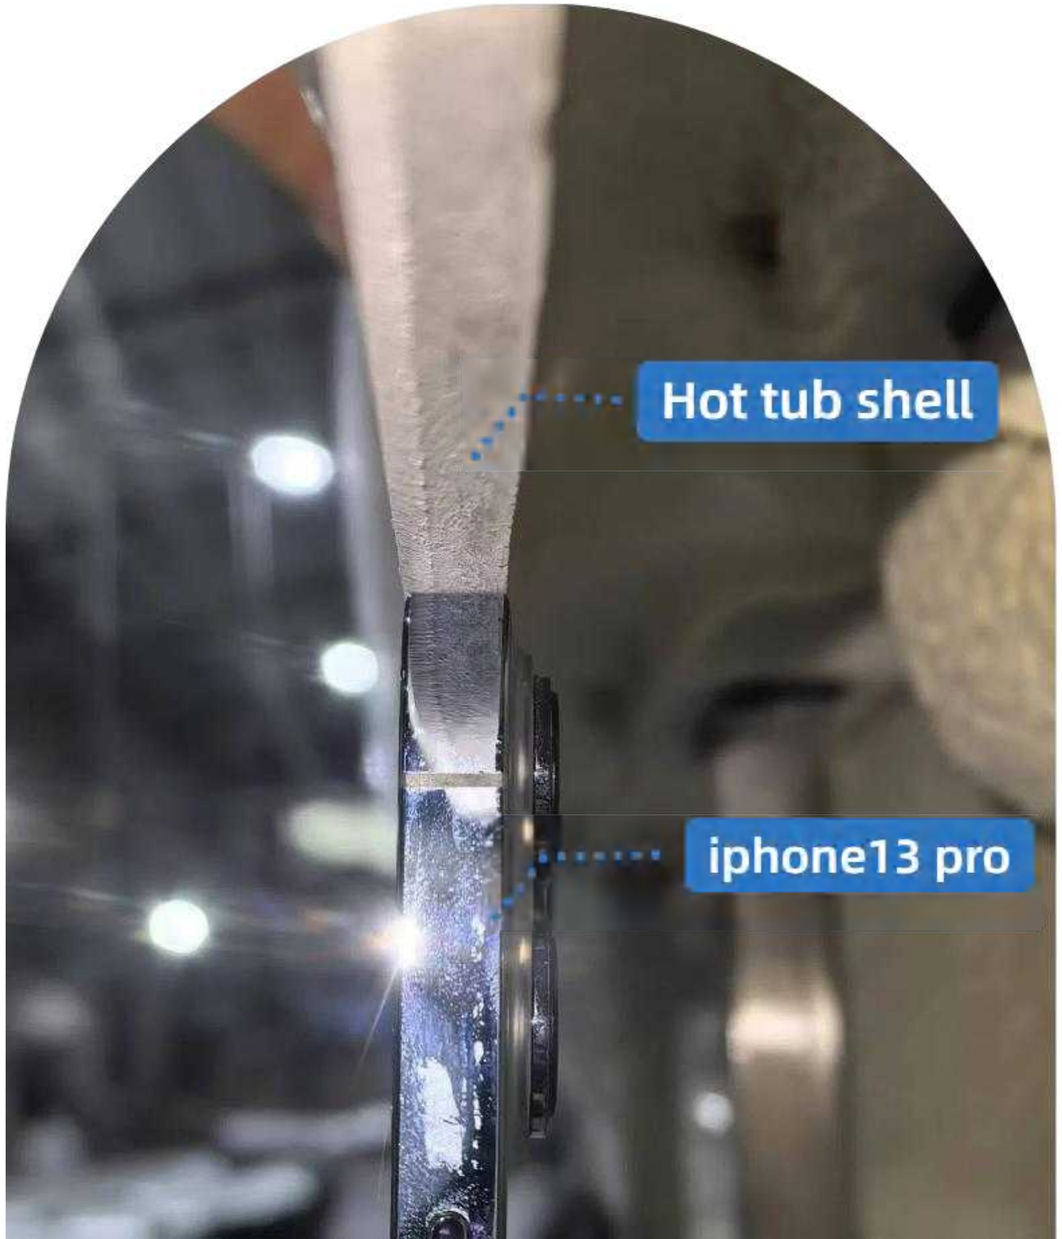
Spa Shell

Durable & Beautiful

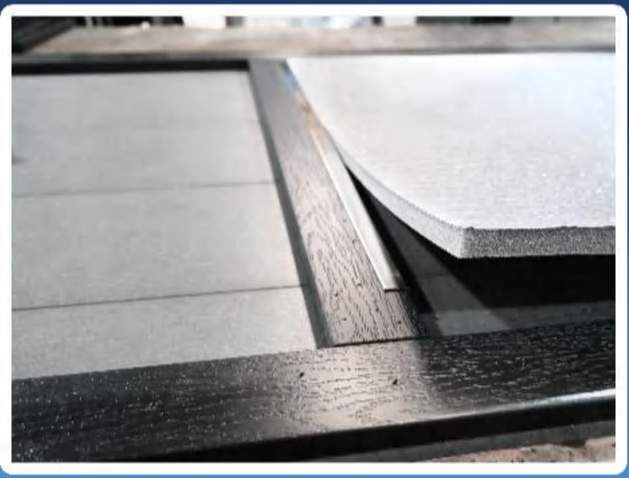
High-Strength Spa Body

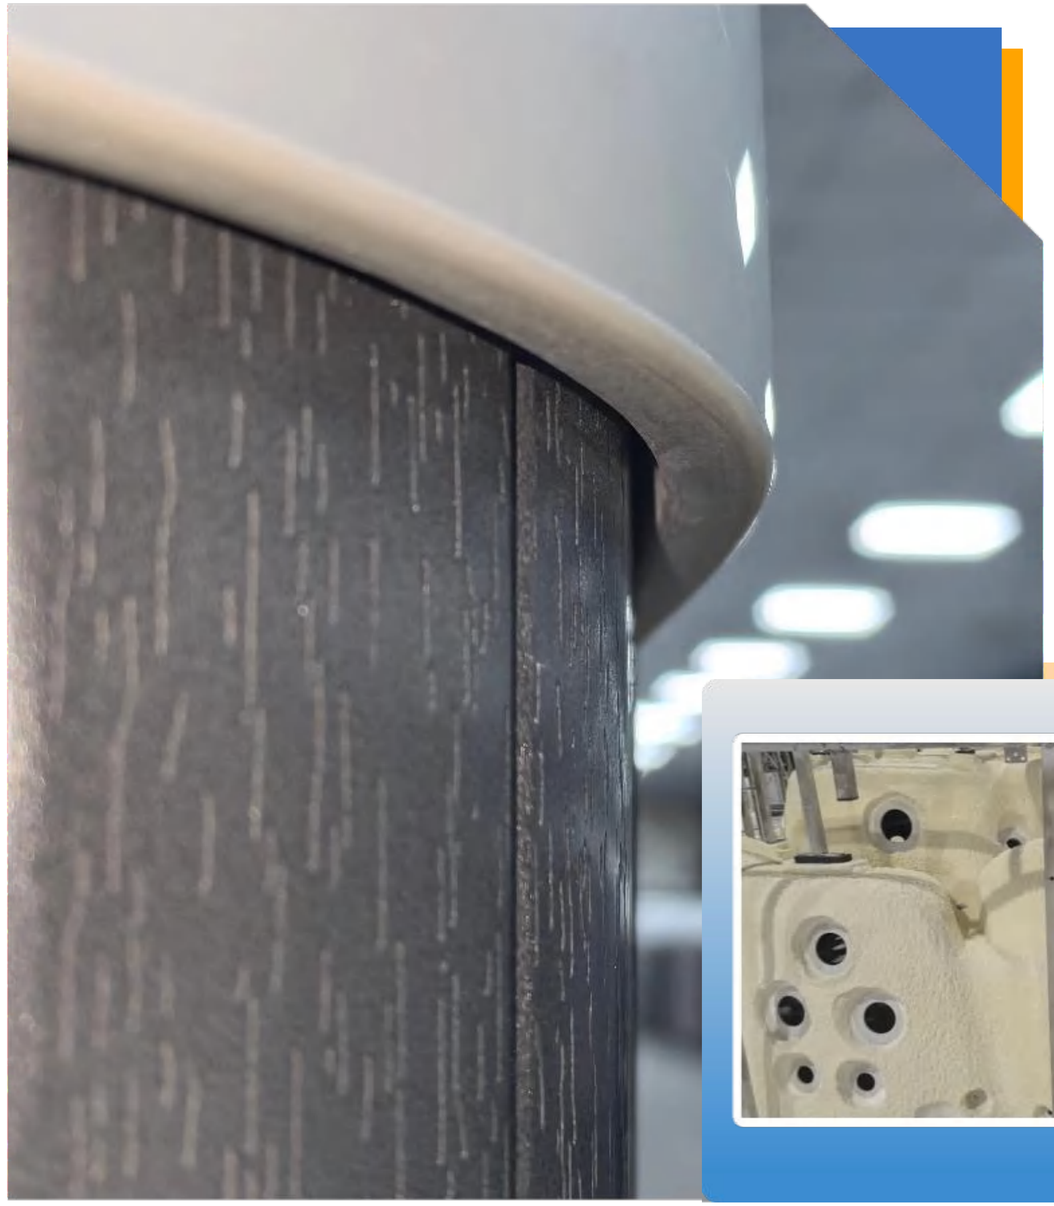
We use the vinyl ester resin as first layer of reinforcement on entire shell to avoid the blister problem. After that, we spray 6 layers of fiberglass for the reinforcement. The thickness of our spa body is around 8mm which is much stronger than the normal spas with only 3-4 layers reinforcement.



Heat-Lock Insulation

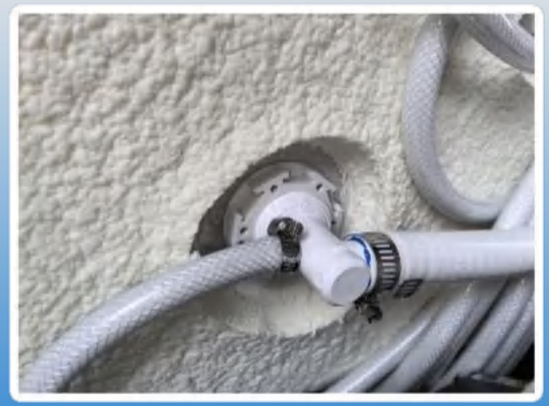
Each spa body is covered with high-density polyurethane foam with an average thickness of 25mm (density about 30kg/m³), providing better thermal insulation performance. In addition, the inner side of the skirt panel is equipped with 15mm-thick aluminum foil insulation.





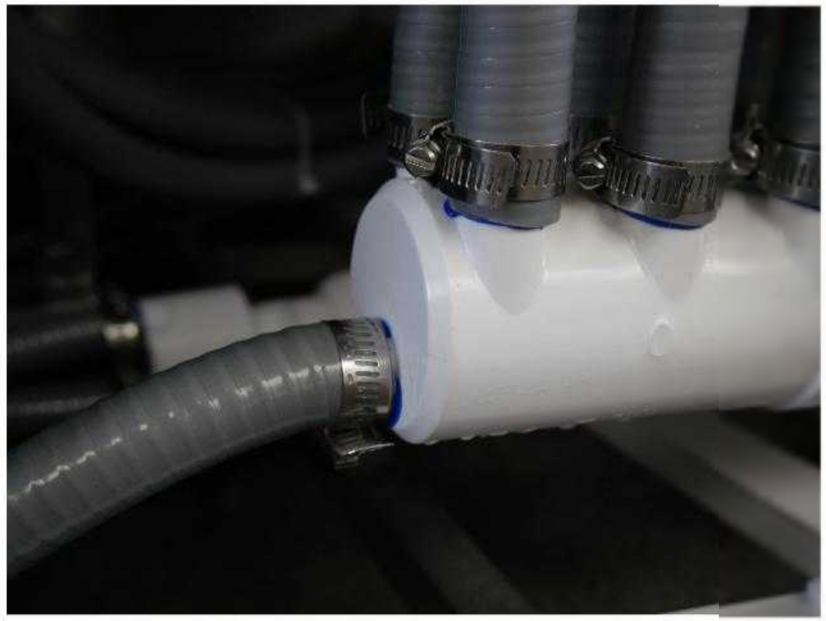
Meticulous Cutting and Polishing Process

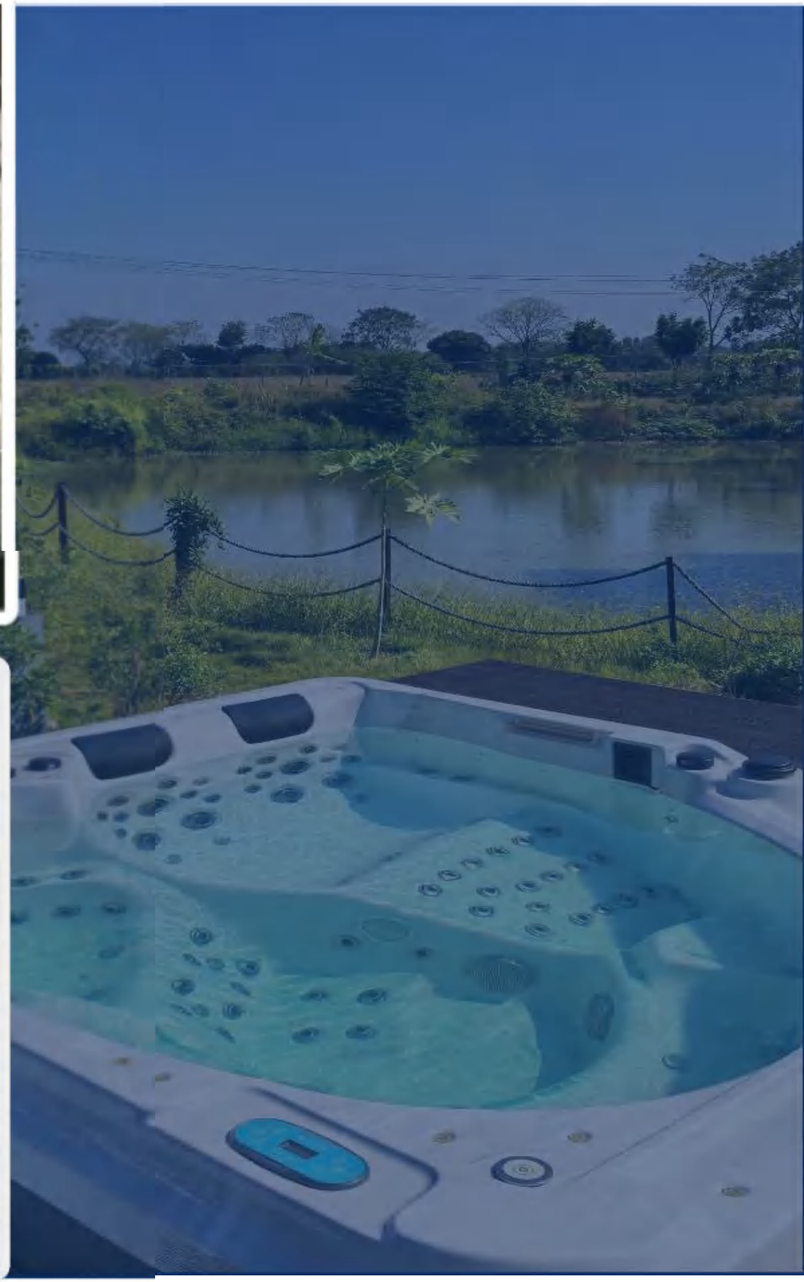
The nozzle area is polished into a flat surface, ensuring a high fitting degree during nozzle installation, easy tightening, and minimal gaps to prevent water leakage from the nozzles. Besides, every edge of the spa body is carefully polished to avoid scratches.



Leak-Proof Pipes

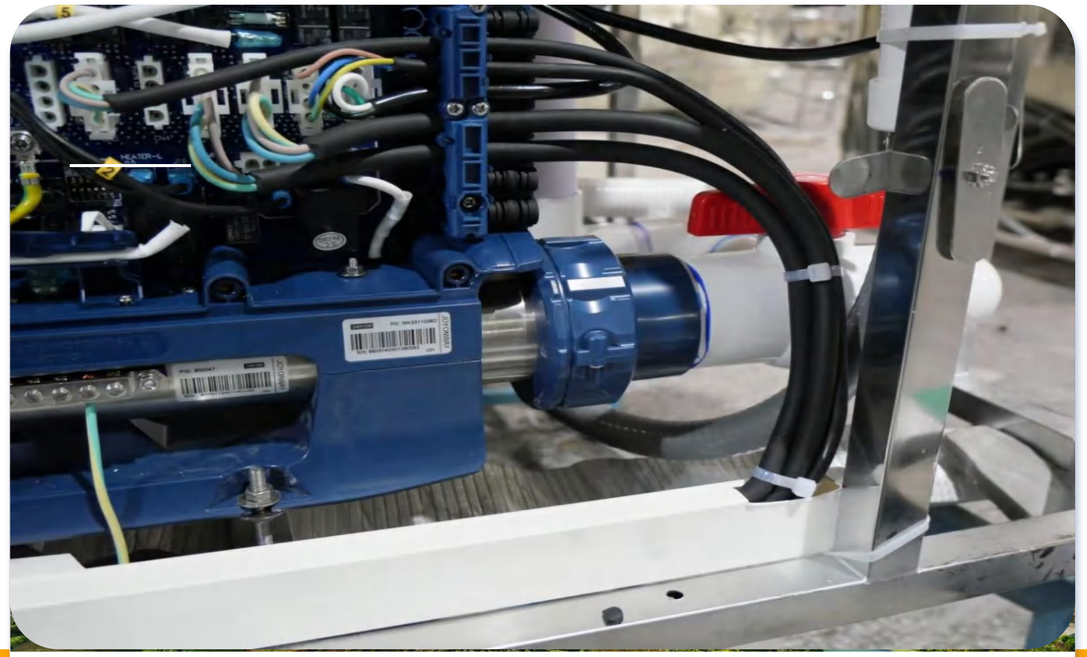
We fix the pipes with imported blue glue and then tighten with the S/S clamp. It has double security to avoid any minor leaking.



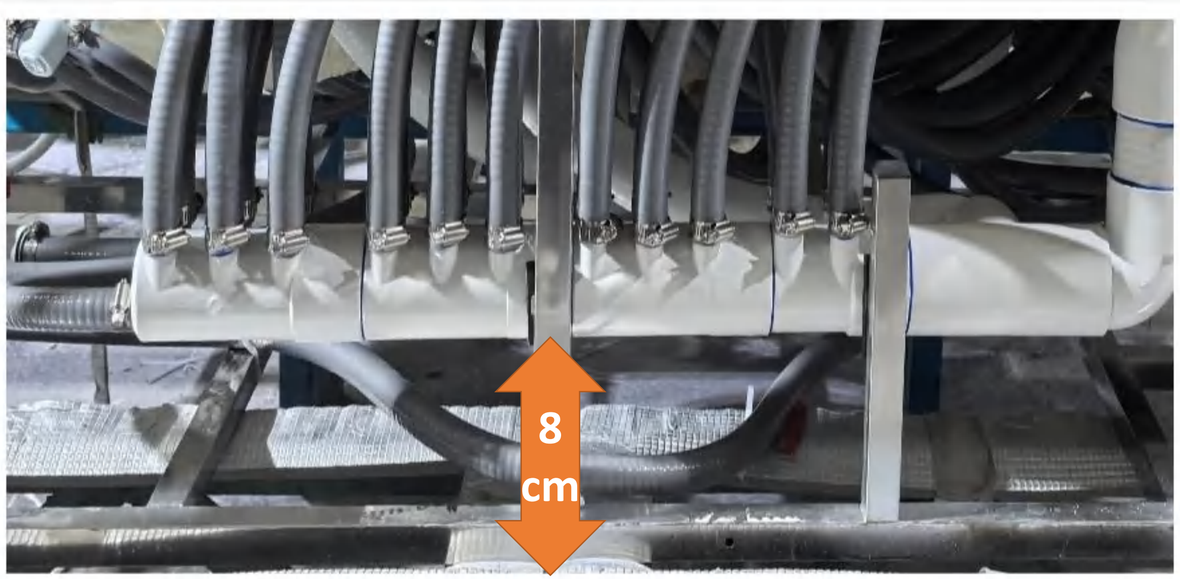


Standard Layout of Wire and Pipes

All internal wires are organized in wire grooves to enhance safety further.

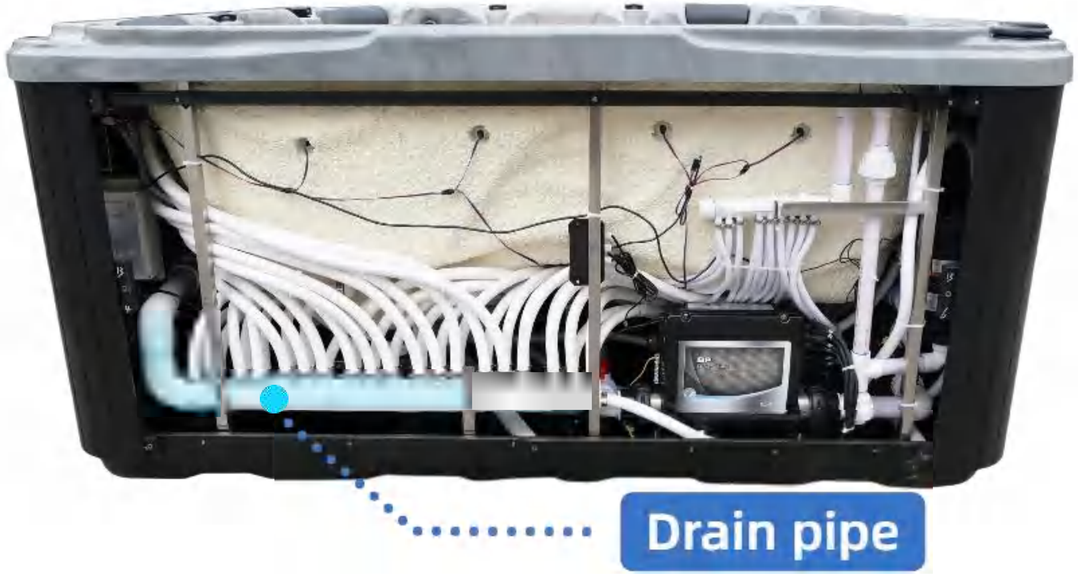


All pipes are arranged scientifically to keep the internal space neat and orderly.



Original Drainage System

Every AquaSpring spa has the bottom drain valve as standard and has the exclusive draining plumbing system: its pipe is appr. 15cm higher from the bottom and all the pipes are connected to the drain valve on the skirt. So more than 99% water inside the spa and pipes can be emptied when people want to dry the spa.

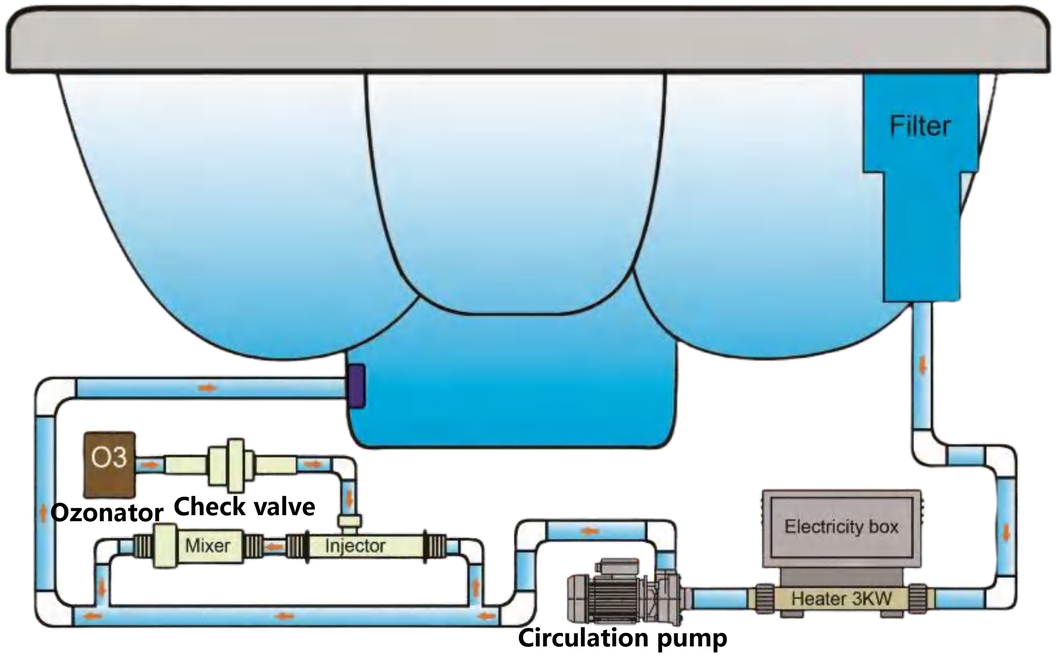


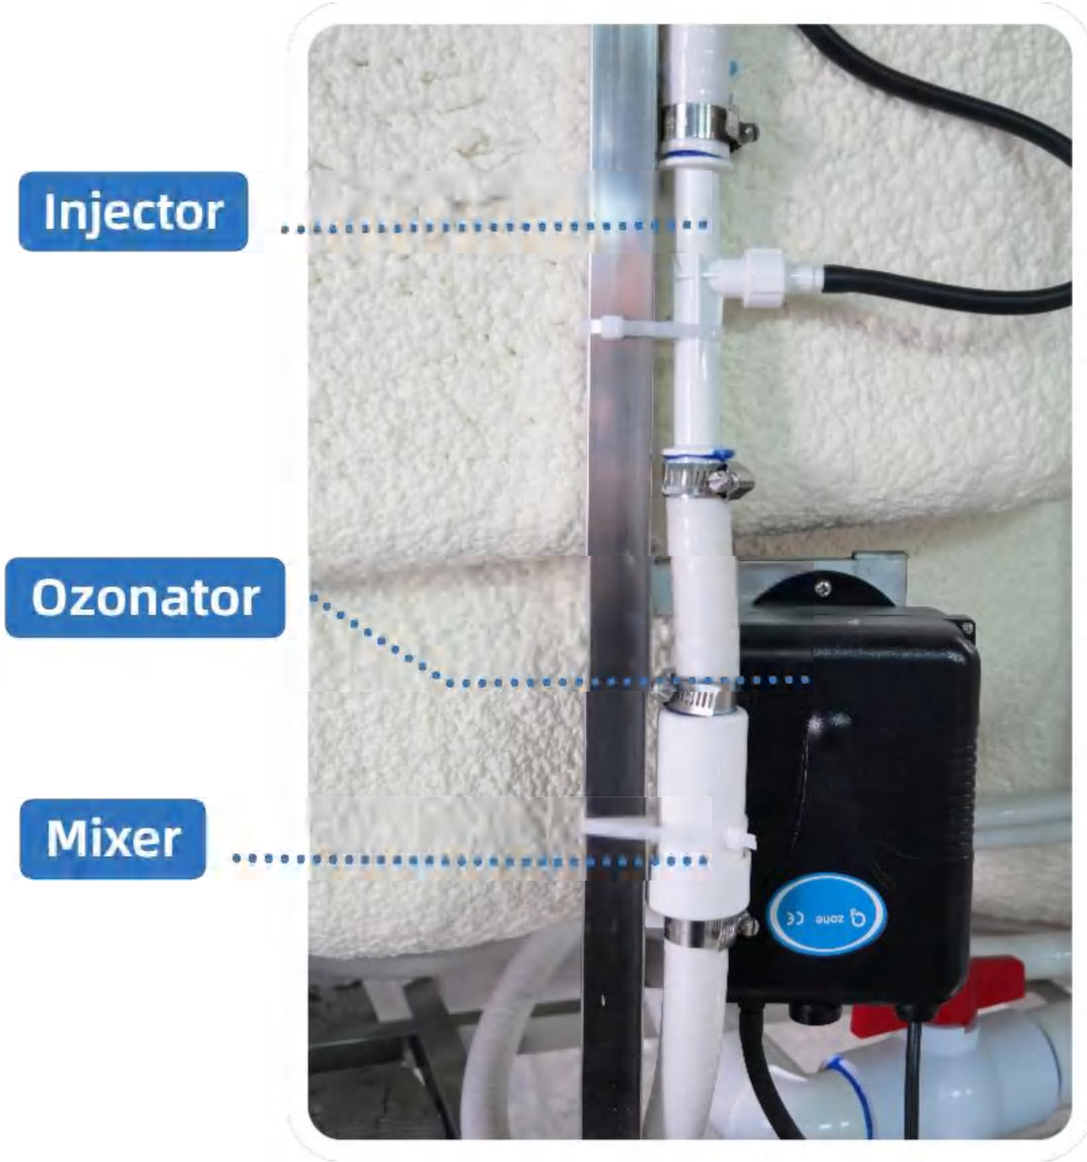
Inspection Valve

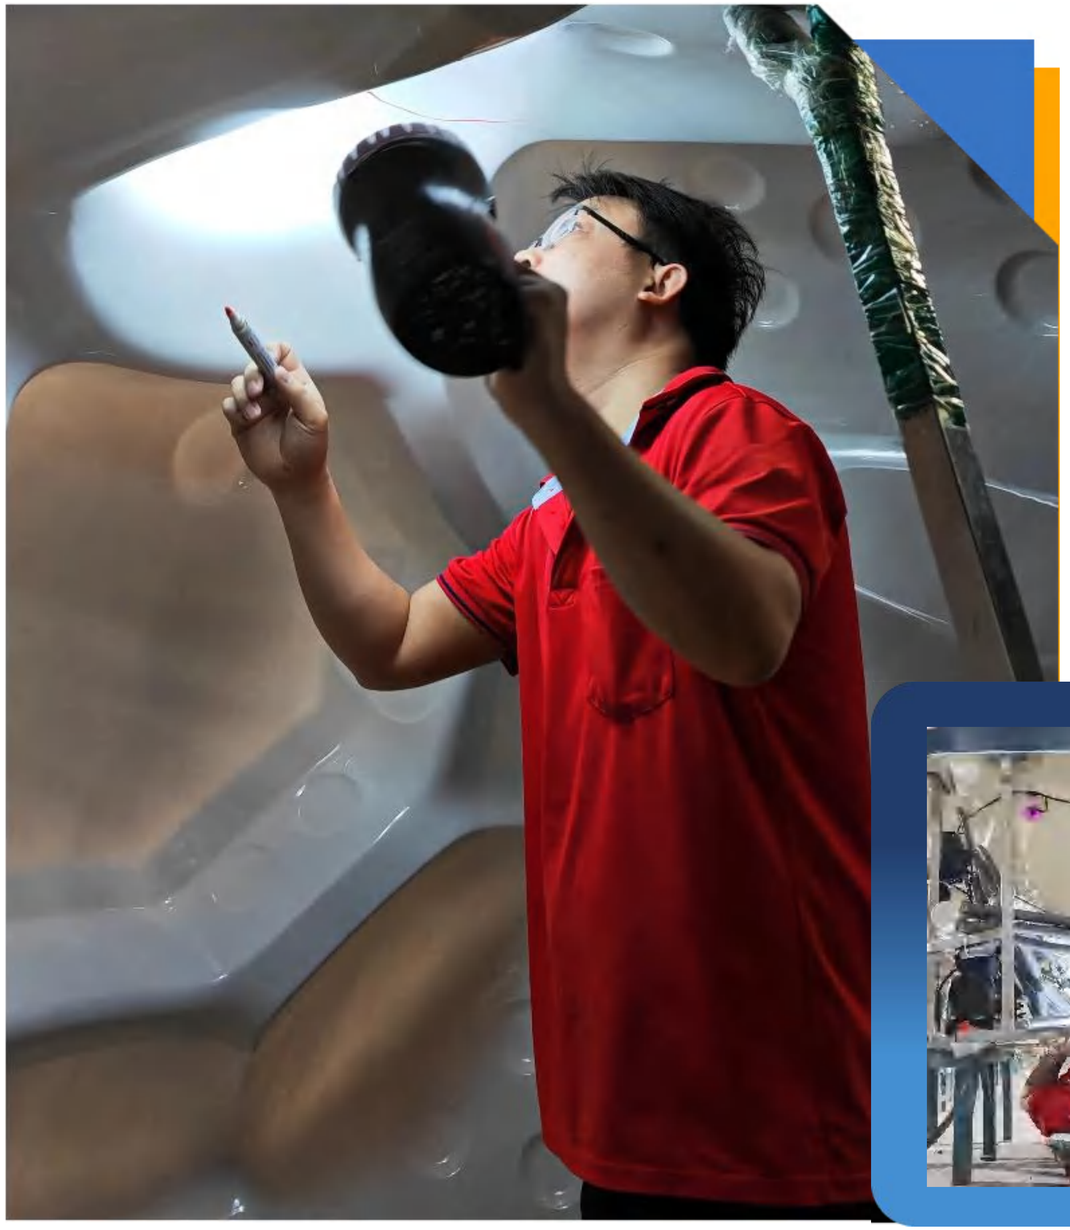
In the internal structure of Aquaspring spas, each pump’ s water inlet pipe is equipped with a ball valve. During inspection and maintenance, each pump can be inspected individually without disassembling the pump, facilitating future maintenance work.

Efficient Ozone System

The ozone generator of Aquaspring spas has been upgraded and designed not to be directly connected to the jet nozzles. The entire disinfection system consists of an ozone generator, check valves, an injector, an ozone mixer, and an anti-oxidation hose. The ozone generator is equipped with two check valves to prevent backflow. The ozone mixer can better mix water and ozone to achieve the best disinfection effect.





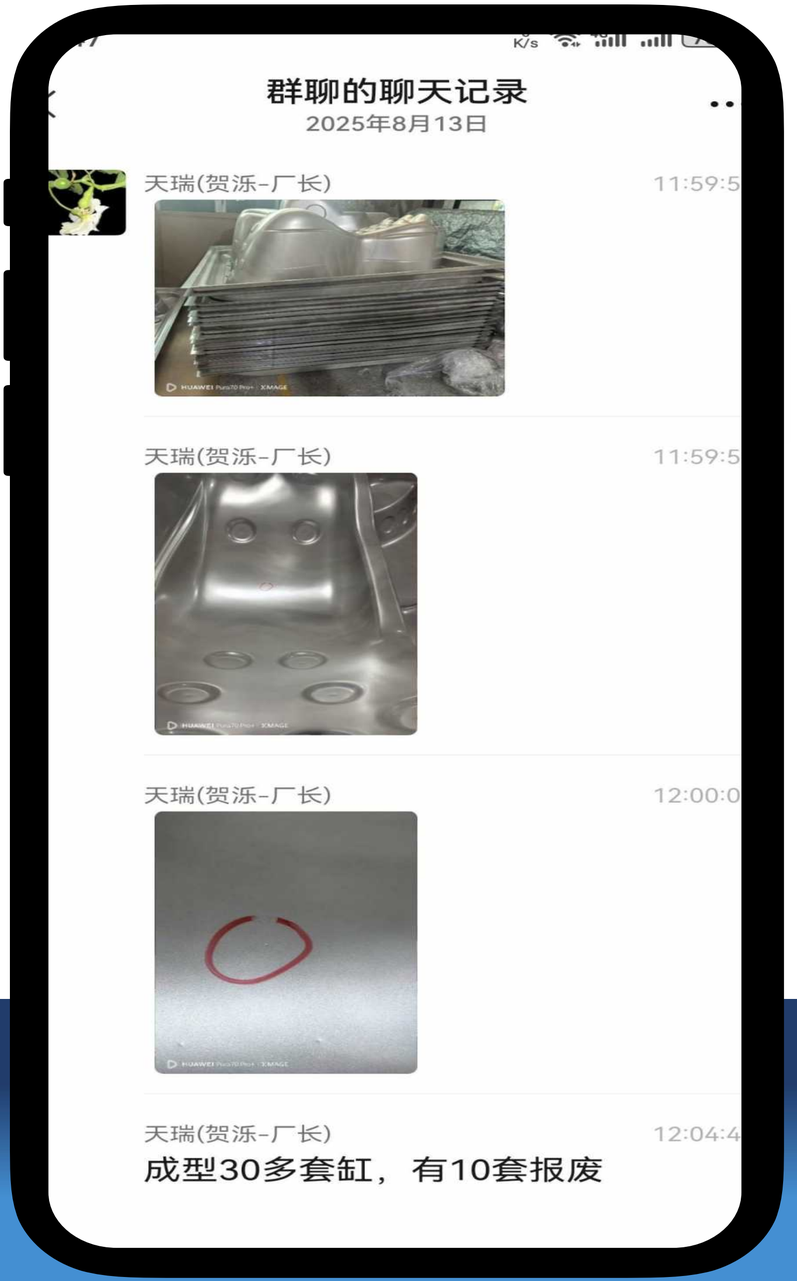


Strict Quality Inspection

During the production process, products undergo strict multi-stage inspection procedures. After the spa body is formed, the acrylic shell body will be carefully inspected first, and no surface defects are allowed. After installing the components, two water tests are conducted: the first test run lasts at least 6 hours, and the second test run lasts at least 3 hours. Finally, there is an electrical inspection before packaging to fully ensure the quality of the spas.

Strict Corporate Standards

Aquaspring adheres to quality standards that far exceed industry requirements to control product quality. Even if products have only minor defects, they will all be scrapped if they fail to meet Aquaspring's corporate standards, thus preventing substandard spas from entering the market.



Significant Features

Extreme Temperature Resistance Test for Spas

Aquaspring is equipped with intelligent high-temp and low-temp testing labs to simulate extreme outdoor hot and cold weather. Our spas are placed in these labs for testing to check the structural stability and material durability of the spas when exposed to extremely high and low temperatures for a long time. Through these tests, it is ensured that the spas can be used stably under various extreme temperatures.

Intelligent low-temp testing lab

Intelligent high-temp Laboratory testing lab

Certification

With research and development experience, with a number of invention patents and utility model patent certificates.
