## Langfang Jiwei Medical Technology Co., Ltd.

Factory & Overview Gallery

### 1. Company Profile

Langfang Jiwei Medical Technology Co., Ltd. is a high-tech enterprise specialized in the biomedical industry. Strategically located in Guangyang District, Langfang, our company enjoys convenient transportation and close proximity to Beijing. We focus on the research and development, standardized production, global sales and technical support of biomedical products. Complying with strict industrial production standards, we consistently deliver safe, stable and high-quality medical and biochemical products to worldwide clients. Backed by mature production lines and a complete quality management system, we have built a reliable global sales and service system for long-term international cooperation.

### 2. Core Product Portfolio

We maintain a diversified product portfolio, covering medical devices, disposable consumables, pharmaceutical raw materials, fine chemicals, synthetic polypeptides, beauty skincare goods and hypoglycemic health supplements. Every item is manufactured under standardized procedures and undergoes rigorous inspection to meet international trade quality requirements.

## **2.1 Medical Devices & Disposable Syringes**

We provide sterile disposable syringes featuring excellent airtightness, smooth plunger movement and zero leakage. All medical consumables are produced in dust-free purification workshops and fully conform to international medical safety standards. Widely applied in clinical treatment, medical injection, laboratory testing and daily medical protection, our medical supplies ensure high safety and stable performance for global medical institutions and distributors.

## **2.2 Pharmaceutical Raw Materials & Fine Chemicals**

Our chemical product range includes high-purity pharmaceutical intermediates, bulk chemical raw materials and customized fine chemicals. These raw materials feature low impurity levels, stable chemical properties and superior biocompatibility. They are extensively utilized in pharmaceutical synthesis, biochemical research, medical experiments and industrial precision processing, serving as trustworthy raw materials for pharmaceutical factories and research laboratories.

## **2.3 Synthetic Polypeptides (Hot-Selling Series)**

We specialize in polypeptide synthesis and purification, supplying mainstream high-purity products including Retatrutide, Semaglutide, GHK-CU and NAD. By adopting advanced solid-phase synthesis and high-precision purification technologies, our polypeptides possess stable molecular structure, high purity rate and outstanding absorbability.

- **Retatrutide & Semaglutide:** Well-known for stable hypoglycemic performance and effective weight management effects.
- **GHK-CU:** Premium cosmetic polypeptide with strong antioxidant, skin repairing and anti-aging properties.
- **NAD:** High-activity raw material widely used in anti-aging healthcare and biological research.

## **2.4 Beauty Skincare & Hypoglycemic Health Products**

Our beauty and health products are formulated with mild natural ingredients and high-efficiency polypeptide components. The skincare line focuses on moisturization, anti-wrinkle treatment, oxidation resistance and skin barrier restoration. Additionally, our hypoglycemic supplements gently assist blood sugar regulation without side effects, perfectly catering to the daily healthcare demands of hyperglycemic

populations.

### 3. R&D Strength & Quality Control

Equipped with powerful independent R&D capabilities and mature synthesis technology, we establish long-term cooperative relationships with overseas enterprises and research institutions. A complete quality control system covers raw material screening, production processing and finished product testing to ensure stable product quality. Adhering to the principle of **Customer-Oriented & Quality-First**, we provide one-stop after-sales services, including professional consultation, technical support, usage guidance and long-term after-sale tracking to fully resolve clients' procurement and technical concerns.

### 4. Global Service & Trading Advantages

Our products are exported to the United States, Europe, South Africa, Asia-Pacific and other global regions, forming a stable international sales network. We optimize every trading procedure to deliver cost-effective and convenient purchasing experiences for all partners.

- **Stable Mass Supply:** Sufficient inventory supports bulk orders and long-term cooperation.
- **Competitive Factory Price:** Direct ex-factory price to reduce procurement costs.
- **Door-to-Door Logistics:** Safe and traceable global transportation services.
- **Customized Solution:** Support formula adjustment, raw material customization and personalized packaging.
- **Free Sample Service:** Samples are available for quality inspection and evaluation.
- **Fast Shipment:** Complete export qualifications ensure smooth customs clearance and shipment within 2-3 working days.
