

ZYX AUTO

Automotive Infotainment Upgrade Solutions

Car Stereo Fascia Kits • Wiring Harnesses • CANBUS Decoder Solutions

10+	3000+	GLOBAL
Years of Industry Experience	Vehicle Applications	Aftermarket Focus

SHENZHEN ZHONGYIXING ELECTRONIC TECHNOLOGY CO., LTD.
Professional aftermarket installation accessories for vehicle
multimedia upgrades.

A Specialized Partner for Automotive Aftermarket Upgrades

Shenzhen Zhongyixing Electronic Technology Co., Ltd., under the ZYX AUTO brand, focuses on automotive aftermarket accessories for in-car multimedia and head-unit upgrades. Our core portfolio includes vehicle-specific car stereo fascia kits, wiring harnesses, CANBUS decoder solutions and related installation accessories.

With a strong focus on application matching, we help distributors, e-commerce sellers, car audio installers and aftermarket businesses identify practical solutions for different vehicle models, production years, original connectors and factory configurations.

Office & Operations

MISSION	VISION	VALUES
Make automotive infotainment upgrades easier through reliable, vehicle-specific installation solutions.	Build a trusted global aftermarket brand for multimedia installation accessories.	Compatibility • Quality • Professional Service • Long-Term Partnership

Four Core Product Categories

01 Car Stereo Fascia Kits

Vehicle-specific dash panels for integrating aftermarket displays with original dashboards.

02 Wiring Harnesses

Connection solutions for power, speakers, factory connectors and selected retained functions.

03 CANBUS Decoder Solutions

Interfaces for selected vehicle communication functions and compatible head-unit platforms.

04 Installation Accessories

Supporting adapters and connection products for professional aftermarket installation.

Our Solution Philosophy

A successful head-unit upgrade often depends on more than one accessory. Vehicle year, original radio, connector type, factory amplifier, camera configuration and head-unit platform can all affect compatibility. ZYX AUTO therefore focuses on application-based matching rather than treating each component as an isolated product.

Vehicle-Specific Fitment with an OEM-Inspired Look

Representative selection of ZYX AUTO fascia applications

FITMENT	DESIGN	APPLICATION
Developed around specific dashboards, model years and installation openings.	Designed to integrate aftermarket screens into the original dashboard appearance.	Suitable for installers, distributors, retailers and aftermarket upgrade projects.

Compatibility note: Confirm vehicle model, production year, dashboard version and target screen size before ordering.

Designed Around Real-World Installation

Aftermarket head-unit installation with a vehicle-specific fascia

Why Fitment Matters

A well-matched fascia should align with the original dashboard opening, provide a secure mounting interface and create a clean visual transition to the aftermarket display. Vehicle-specific design helps installers reduce unnecessary modification work.

Recommended Pre-Order Information

01	Vehicle make / model / year
02	Original radio or head-unit type
03	Target aftermarket screen size
04	Clear photo of the original radio / rear connectors when compatibility is uncertain

Clean Connections. Easier Installation.

Representative range of vehicle-specific wiring harnesses

Connection Solutions

ZYX AUTO wiring harnesses are developed for selected vehicle and head-unit applications. Depending on the application, solutions may address power, speaker outputs, ACC, steering-wheel controls and other retained functions.

Key principle: connector shape and pin configuration must match the original vehicle system. A visually similar connector does not necessarily mean electrical compatibility.

Vehicle Communication & Function Retention

Representative CANBUS decoder products and application variants

Typical Supported Functions

Depending on the specific vehicle, decoder and head-unit platform, CANBUS solutions may support functions such as ACC signal handling, steering-wheel controls and other vehicle communication features.

Important: Function support varies by vehicle configuration and decoder firmware. Factory amplifier, original camera and 360° camera systems may require specific solutions and should be confirmed before purchase.

The Right Product Starts with the Right Vehicle Information

Our compatibility process is designed to reduce incorrect orders and installation problems. For uncertain applications, we recommend confirming the following information before shipment:

- 01** Vehicle make / model / production year
- 02** Original radio / factory head-unit configuration
- 03** Rear connector shape and pin count
- 04** Factory amplifier or premium audio system
- 05** Factory rear camera / 360° camera configuration
- 06** Target aftermarket head-unit brand and platform

This application-first approach is especially important when the same vehicle model has multiple connector versions or factory equipment levels across different years and markets.

A Flexible Partner for the Global Aftermarket

Distributors & Wholesalers

Broad application coverage and support for recurring aftermarket sourcing.

Car Audio Installation Shops

Practical fascia, harness and CANBUS solutions for daily installation work.

E-Commerce Sellers

Application-oriented product information for online automotive aftermarket sales.

Importers & Regional Brands

Flexible cooperation for market-specific sourcing and product programs.

OEM / ODM Projects

Discuss application-specific accessories and customized development requirements.

Why ZYX AUTO

Focused product portfolio • 3000+ vehicle applications • Practical compatibility experience • Responsive communication • Long-term cooperation mindset

Let's Build Better Automotive Upgrade Solutions

ZYX AUTO
